

HR User Role Guide

Everything a recruiter needs to run sourcing work: from uploading a job description to exporting a scored, shortlisted candidate list.

Role: HR User

Personal workspace

Document 3 of the System Guide

What is inside

- 1 Role at a glance
- 2 Getting access and signing in
- 3 Navigation
- 4 Dashboard
- 5 Jobs list
- 6 Creating a job and finding candidates
- 7 Working the candidate list
- 8 Candidate profile
- 9 The six statuses
- 10 How the AI pipeline works
- 11 Reports for your own work
- 12 Button and control reference
- 13 Step-by-step tasks
- 14 Rules, limits and visibility
- 15 Troubleshooting FAQ and gotchas

Written from the application source code and the live database structure. Screens shown are wireframes that mirror the real layout; numbers and names in them are examples only.

Contents

- 1 Role at a glance
- 2 Getting access and signing in
- 3 Navigation
- 4 Dashboard (/dashboard)
- 5 Jobs list (/jobs)
- 6 Creating a job and finding candidates (/jobs/new)
- 7 Working the candidate list (/candidates)
- 8 Candidate profile (/candidates/[id])
- 9 The six statuses and what they trigger
- 10 How the AI pipeline works
- 11 Reports for your own work (/reports)
- 12 Button and control reference
- 13 Step-by-step tasks
- 14 Rules, limits and who can see your work
- 15 Troubleshooting FAQ and gotchas

How to read this guide

Chapters 1 to 3 orient you. Chapters 4 to 8 walk through each screen in the order you will meet them. Chapters 9 to 11 explain the concepts behind what you see. Chapters 12 to 15 are for reference. Screens are shown as wireframes with red numbered markers; the numbered legend below each wireframe explains every marker.

TIP Tip callouts

Blue boxes give shortcuts and good habits.

Warning callouts

Amber boxes flag behaviour that can surprise you.

Red callouts

Red boxes mark actions that cannot be undone.

1. Role at a glance

HR User is the individual recruiter. You have a **personal workspace**: every job you create, every candidate the platform finds for you and every score, note and status you set belongs to you (your HR Manager and Admins can look, but not change).

Scope in one sentence
You see and change **only your own jobs and candidates**. Nothing you do affects a colleague’s data, and nothing a colleague does affects yours.

CAN SEE

- Your own dashboard, jobs and candidates
- Match scores and AI summaries for your candidates
- Your own notes on each candidate
- Reports scoped to “My work”
- Your account e-mail (Settings)
- Who last opened each of your sourcing files

CAN DO

- Create jobs from an uploaded or pasted job description
- Run AI analysis and edit the extracted requirements
- Start candidate searches (Egypt)
- Score candidates with AI
- Filter, sort, page and export candidates to Excel
- Change candidate status, add notes
- Delete jobs and candidates you own
- Export your own reports as CSV or Excel

CANNOT DO

- See other people’s jobs, candidates or dashboards
- Open the Team (/manager) or Admin (/admin) areas
- See the notification bell (managers and admins only)
- Invite users or change roles
- Edit a job after creation (no edit screen)
- Edit or delete a note once saved
- Change your password or profile in Settings

Role comparison

Capability	HR User	HR Manager	Admin
Create jobs, search, score, export own candidates	Yes	Yes	Yes
Change status / notes on own candidates	Yes	Yes	Yes
Read teammates’ jobs and candidates	No	Own team, read-only	All, read-only
Reports	My work only	Own team	Organization or a team
Notification bell	No	Yes	Yes
Team page	No	Yes	Yes
Admin page (invites, roles, teams)	No	No	Yes

If you try something you cannot do
The screens simply do not show the control. If a request is forced anyway, the platform refuses it with a message such as “You can view this job, but only its owner can change it.”

2. Getting access and signing in

2.1 How you get access

The platform is not open to everyone. Access exists only when your account is marked **active**. There are two routes to it:

Route A: you are invited (recommended)

- 1 An Admin enters your e-mail on the Admin page and picks the role **HR User** and your team.
- 2 You open the login page and sign up (or use Google) with **that exact e-mail**.
- 3 Your account is created already active, with the role and team the Admin chose. You land on the Dashboard.

Route B: you ask for access

- 1 You sign up with an e-mail nobody invited.
- 2 The account is created **inactive** and every Admin is notified of an access request.
- 3 Until an Admin approves it, signing in shows: *"Your account doesn't have access yet. Ask an admin to invite you or approve your access request."*

There is no "rejected" message

Admins have an Approve button but no Reject button. If nobody approves your request you simply keep seeing the "doesn't have access yet" message. Contact an Admin directly.

2.2 The login screen

The screenshot shows a web browser window with the address bar at /login. The login form is titled "Log in" and contains the following elements:

- 1. A text input field for "Email".
- 2. A text input field for "Password".
- 3. A blue "Log in" button.
- 4. The word "or" centered below the button.
- 5. A button labeled "Continue with Google".
- Below the "Continue with Google" button is a link: "Need an account? Sign up".

- 1 **Email:** a valid e-mail address (browser validation).
- 2 **Password:** at least 6 characters.
- 3 **Log in** button. It reads "Please wait..." while working.
- 4 **Continue with Google:** reads "Redirecting..." while working.
- 5 **Mode switch:** toggles between "Need an account? Sign up" and "Already have an account? Log in".

Signing in with e-mail and password

- 1 Open the platform address. Visiting any page while signed out sends you to the login page.
- 2 Type your e-mail and password and press **Log in**.
- 3 On success you always land on the **Dashboard**.
- 4 On failure the reason is shown in red under the form.

Signing up for the first time

Press **Need an account? Sign up**, enter e-mail and password (6+ characters) and press **Sign up**. You will see: *"Account created. Check your email to confirm, then log in. If you weren't invited, an admin will need to approve your access first."* Confirm your e-mail from the message you receive, then log in.

Signing in with Google

Press **Continue with Google**, choose your Google account and you return to the platform automatically. The Google e-mail must be the invited e-mail. If Google sign-in fails you see “Google sign-in failed. Please try again.”

Logging out

Press **Log out** at the far right of the top bar. There is no confirmation; you are sent straight to the login page. Sign-ins, failed sign-ins for known accounts and sign-outs are recorded in the activity log.

Access can be removed while you are working
If an Admin deactivates your account, your next page load signs you out and shows the “doesn’t have access” message. Any action already in progress in the browser is refused with “Unauthorized”.

Message on the login page	Meaning	What to do
Your account doesn't have access yet...	Account exists but is inactive, or has no profile	Ask an Admin to invite or approve you
Google sign-in failed. Please try again.	Google flow did not complete	Retry; use the invited Google account
Account created. Check your email...	Sign-up succeeded	Confirm e-mail, then log in
Error text in red	Wrong password, unconfirmed e-mail, etc.	Correct the details and retry

3. Navigation

Every page shares one sticky top bar. As an HR User it has exactly five links plus **Log out**.

- 1 **AI Candidate** (brand): always returns to the Dashboard.
- 2 **Main links**: Dashboard, Jobs, Candidates, Reports, Settings. The current section is underlined (Dashboard only on the exact page).
- 3 **Reports** shows your own work only.
- 4 **Log out**: signs you out immediately.

What you do not see
The **Team** link (managers and admins), the **Admin** link (admins) and the **notification bell** (managers and admins). This is normal for an HR User. Your manager is told about your shortlists and hires instead (see chapter 9).

Settings page
Shows one card, **Account**, with “Signed in as <your e-mail>”. There are no controls: you cannot change your password, name or preferences here.

Typical journey

The usual path through the platform.

4. Dashboard

</dashboard> **Your personal Dashboard** [HR User](#)

The Dashboard is the landing page after every sign-in. It is **personal**: every number counts only rows you own. There are no filters, date ranges or settings; the only interactions are the links and buttons. While the page loads you see grey placeholder cards.

- Header banner** with **New Job Opening** (goes to </jobs/new>) and **Browse Candidates** (goes to </candidates>), plus a static four-step guide: Upload Job Spec, AI Criteria Extraction, Autonomous Sourcing, AI Scoring & Excel.
- Active Jobs** stat card.
- Total Candidates** stat card.
- Average Match Quality** stat card.
- Shortlisted Talent** stat card.
- Candidate Pipeline Stages** bar chart.
- Match Score Distribution** histogram.
- Today's Searched Candidates** list.
- Sourcing Files** table (one row per search run) with the **New Job** and **View** buttons.

4.1 Exactly how every number is computed

Card	What it counts	Watch out for
Active Jobs	Number of jobs you own. It is not filtered by any "active" flag: every job you ever created, minus ones you deleted.	The name says "Active" but it is your total job count.
Total Candidates	Number of candidate records you own. Candidates are stored once per person for you, even if found for several jobs.	A person found for two jobs counts once.

Card	What it counts	Watch out for
Average Match Quality	The match scores are grouped by search run ; each run's scores are averaged; then those per-run averages are averaged and rounded. Every scored sourcing file therefore weighs the same, big or small. If nothing is scored, the card says <i>"No evaluated files yet"</i> .	Scores with no search run attached are ignored here. Runs with no scores are left out. Stays empty until you press Score Candidates .
Shortlisted Talent	Candidates you own whose status is currently Shortlisted .	Moving a candidate to Hired removes them from this count.

Candidate Pipeline Stages

A badge shows "N total". Horizontal bars show how many of your candidates currently have each status, in this order: **New, Reviewed, Shortlisted, Contacted, Hired, Rejected**. Bars are sized relative to the biggest stage (with a small minimum width); a stage with zero has no bar. Status is a property of the candidate itself, so the chart is across all your jobs. Empty state: *"No candidates yet — run a search to start building your pipeline."*

Match Score Distribution

A five-bar histogram of **every** match score you own, in buckets **0-20, 21-40, 41-60, 61-80, 81-100**. A green badge shows the overall average ("68% avg"). Hover a bar to see "61-80%: N candidate(s)". Empty state: *"No candidates scored yet — run 'Score Candidates' on a job to see the match-quality breakdown here."*

Two averages can differ

The Average Match Quality card averages per sourcing file, and skips scores that have no run attached. The distribution chart badge includes all scores. Small differences between the two are expected.

Today's Searched Candidates

Badge "N today" (green when above zero) counts candidate records **created** since midnight (server time, which is UTC when hosted on Vercel, not your local midnight). The list shows the latest 8: name, headline, the job the candidate was first linked to, and the time. Empty: *"No candidates sourced today yet"*.

Two things to know

(1) A person who already existed and is found again today is **not** counted, only brand-new records. (2) Clicking a name opens the profile **without** a job, so there is no Match Score card and the candidate is not marked as seen. To see the score, open the candidate from the job's candidate list instead.

4.2 Sourcing Files table

One row per **search run**, newest first, limited to the latest 20 runs on your jobs. Empty state: *"No sourcing activity yet"*.

Column	Meaning
Job Title	The job's title ("Untitled Role" if blank).
Sourcing Status	Badge for the run: pending and running (amber), complete (green), error (red).
Total Candidates	Candidates first linked to your job by <i>this</i> run. If a later re-run finds someone already linked to the job, that person stays attributed to the earlier run, so re-runs show only newly linked people.
Shortlisted	Of those, how many currently have status Shortlisted.
Unseen	Of those, how many you have never opened <i>from the job's candidate list</i> . A candidate becomes "seen" only when you open the profile with the job attached.
File Created By	Display name built from the e-mail (zeyad.ragab@... becomes "Zeyad Ragab").
Last Accessed By	Who most recently opened this run's candidate list. This includes your own visits, and your manager's or an Admin's.
Last Activity	Most recent of: completed, started, created, or last opened. Shown as "Just now", "N minutes/hours/days ago", then a date after 30 days.
Action	View opens the candidates list for that job. The list is for the whole job, not just that run.

Error banner

If part of the data cannot load you see a red banner: *"Some dashboard data failed to load. Try refreshing the page."* Refresh; numbers shown may be incomplete until you do.

TIP Start each day here

Scan Sourcing Files for red **error** badges and amber runs still **running**, then use **View** on the file with the highest Unseen count.

5. Jobs list

/jobs

Jobs

HR User

A simple, read-only list of the jobs you created. Use it to find a job and jump to its candidates.

/jobs

AI Candidate

Dashboard

Jobs

Candidates

Reports

Settings

Jobs

New Job

All Jobs

Title	Location	Employment Type	Seniority	Created	Candidates
React Lead	Egypt	Full-time	Lead	27/09/2026	View Candidates
QA Analyst	Egypt	Contract	Mid	25/09/2026	View Candidates

Page 1 of 2 (14 total)

Previous

Next

- 1 **New Job:** opens `/jobs/new`.
- 2 **All Jobs table,** newest first, 10 per page. Columns: Title, Location, Employment Type, Seniority, Created (date), Candidates. Blank values show a dash-like empty cell.
- 3 **View Candidates:** opens `/candidates?jobId=...` for that job.
- 4 **Pagination:** "Page X of Y (N total)" with Previous and Next (disabled at the ends).

States you may see

- "Loading jobs..."
- Red error text if loading fails
- Empty: "No jobs yet. Create your first job to start finding candidates."

What is not here

No edit, no delete, no job detail page and no export on this screen. To delete a job use the picker on `/candidates` (chapter 7). To change a job, create a new one.

6. Creating a job and finding candidates

/jobs/new

New Job: the core of your work

HR User

This one page takes you from a job description document to a saved job and a list of candidates. It has four stages: **(A)** job details, **(B)** job description and AI analysis, **(C)** review of extracted requirements, and **(D)** finding candidates. Two collapsible cards (Job Details and Job Description) start open; you can click either header to fold or unfold it.

The four stages on the New Job page.

6.1 Stage A: Job Details

/jobs/new

1. Job Details React Lead • G Hotels • Full-time • Hybrid

Job Title *
e.g. Senior React Developer

Company *
Select a company

Employment Type *
Select type (e.g. Full-time)

Work Arrangement *
Select arrangement (e.g. Remote)

Save & Collapse

2. Job Description File Attached

Upload File (PDF / DOCX) Paste Text

Click to upload or drag & drop file
Supports PDF, DOCX, or TXT documents up to 10MB

Analyze Job with AI

- 1 Job Title (required).
- 2 Company (required).
- 3 Employment Type (required).
- 4 Work Arrangement (required).
- 5 Save & Collapse only folds the card.
- 6 Mode toggle: Upload File or Paste Text.
- 7 Dropzone (upload mode) or text box (paste mode).
- 8 Analyze Job with AI (enabled once there are 50+ characters of description).

Field	Required?	Options / rules	Validation message
Job Title	Yes	Free text. Placeholder "e.g. Senior React Developer". If left empty, filled automatically with the AI-detected title after analysis.	"Job title is required."

Field	Required?	Options / rules	Validation message
Company	Yes	Dropdown loaded from the platform: G Developments, G Communities, G Lifestyle, G Hotels, G Clubs, G Utilities, G Investments, BuildDora. Shows "Loading companies..." while loading (disabled). The list is maintained by Admins in the database, not in the app.	"Company is required." If loading fails: "Failed to load companies."
Employment Type	Yes	Full-time, Part-time, Contract, Internship. May be auto-filled from the AI result if still empty.	"Employment type is required."
Work Arrangement	Yes	Remote, Hybrid, On-site. Never auto-filled.	"Work arrangement is required."

Error messages appear after you leave a field (blur) or when you try to continue. When the card is folded, its header shows a one-line summary (title, company, type, arrangement); until you fill things in, it shows placeholder words such as "Role Title" and "Company", not real values.

Auto-filled Employment Type quirk

If the AI proposes an employment type that is not one of the four options, validation passes but the dropdown looks blank. Open the dropdown and pick a value explicitly.

6.2 Stage B: Job Description

Upload File

Accepted files

- **PDF, DOCX, TXT**
- Maximum size **10 MB**
- Type is decided by the file name ending (.pdf, .docx, .txt)
- Old Word **.doc** files are **not** supported: save as DOCX or PDF

What happens after you choose a file

- 1 Toast "Extracting text from <file>..." and the card reads "Parsing text from <file>..."
- 2 Text is extracted on the server. Toast "Upload Successful".
- 3 The card shows the file name, size and "Ready for analysis", plus an "Extracted Text Preview" box.

After a successful upload you can press **Change File** to pick another or the **X** icon to remove the file (this also clears the extracted text). You can drag and drop, but a dropped file of the wrong type is only rejected by the server after it is sent.

Error message	Cause
No file was provided.	The upload contained no file.
File is too large. Maximum size is 10MB.	File above 10 MB. Checked on the server only, after upload.
Unsupported file type ".xyz". Supported types: PDF, DOCX, TXT.	Any other extension, including .doc.
Could not extract text from this PDF file. It may be corrupted or password-protected.	Damaged or protected file (similar wording for DOCX/TXT).
Failed to upload or process the file.	Generic failure (network etc.).

Scanned PDFs extract as empty

The platform does not read images. A scanned or image-only PDF gives an empty result, the description stays empty and **Analyze Job with AI** stays disabled without any message. Open the PDF, copy the text out (or re-export it from Word) and use **Paste Text**.

Paste Text

Click **Paste Text** to get a large text box with the placeholder "Paste the full job description here (responsibilities, technical requirements, qualifications)..." Under it, "Minimum 50 characters required" and a live character counter. There is no maximum.

TIP Better description, better search

Include responsibilities, must-have skills, years of experience, education and seniority. The AI only uses what is written; it does not guess missing requirements.

Analyze Job with AI

- 1 The button is disabled while analyzing or while the description is shorter than 50 characters (after trimming).
- 2 Press it. Both cards fold, a loader card reads “Analyzing Job Description...” and a toast tells you the AI is working.
- 3 The AI reads the description and returns a structured profile (chapter 10). Toast: “Requirements successfully extracted from job spec!”
- 4 The **Extracted Requirements** card (stage C) appears with badge “Analysis Verified”.

If the analysis fails

The cards stay folded and only a toast appears. Reopen the Job Description card to see the red message under it. Common ones: “Job description is too short to analyze.”, “The AI service is currently unavailable. Please try again shortly.”, “The AI returned an unexpected response. Please try again.”, or “Too many requests. Please slow down and try again shortly.” (limit: 10 AI requests per minute, shared with query generation and scoring).

6.3 Stage C: Extracted Requirements

This is your chance to correct the AI before searching. Everything here is editable. The location is always fixed to Egypt.

The screenshot shows the 'Extracted Requirements' stage with a green 'Analysis Verified' badge. The 'Extracted Role Profile' is 'AI-Analyzed'. The form includes fields for Job Title (Senior React Developer), Seniority Level (e.g. Senior, Lead, Mid), Location (Egypt), City (Not specified), Employment Type (Full-time), Min Experience (5 years), and Max Experience (8 years). There are tabs for Skills & Technologies (selected), Education & Qualifications, and Responsibilities & Keywords. Under Skills & Technologies, there are chips for React, TypeScript, Redux, and REST APIs, and a button to Add skill. There are also Preferred Skills chips for Next.js and Jest. At the bottom, there is a 'Ready to Find Candidates?' section with a 'Generate Queries & Find Candidates' button.

- 1 **Text fields:** Job Title and Seniority Level.
- 2 **Location:** Egypt only (dropdown with a single option).
- 3 **City:** optional narrowing (Cairo, Alexandria, Giza, Suez).
- 4 **Experience** range in years.
- 5 **Tabs** switch between skills, education and responsibilities.
- 6 **Editable chips:** click a chip to rename it, click × to remove it, type in the add box and press Enter or **Add**.
- 7 **Generate Queries & Find Candidates** (stage D).

Control	Details
Job Title, Seniority Level	Free text. Seniority placeholder “e.g. Senior, Lead, Mid”.

Control	Details
Location *	Dropdown with only Egypt . The helper text explains that every role sources nationwide in Egypt.
City	"Not specified" plus Cairo, Alexandria, Giza, Suez. Optional. Narrows the Google search to that city instead of nationwide Egypt.
Employment Type	"Not specified" plus the four types.
Min / Max Experience (Years)	Number boxes; empty means no limit. The platform does not check that min is below max or that values are positive.
Tab: Skills & Technologies	Required Skills (green chips) and Preferred Skills (amber chips). Badge shows the combined count.
Tab: Education & Qualifications	Education, Certifications, Languages, Industries.
Tab: Responsibilities & Keywords	Responsibilities and Keywords.
Chip lists	Blank entries are ignored. Duplicates are allowed. There is no maximum.

Section 1 wins for title and employment type

The saved job title and employment type come from **Stage A** fields when those are filled in. Changing the Job Title or Employment Type only inside this editor changes the stored AI analysis, but not the job's title or type shown on your Jobs list. Set them in Job Details.

TIP Curate the skills

Search quality depends mostly on Required Skills and the title. Delete vague or over-specific chips, and keep the list short and meaningful. Choose a City only when you truly need one city: it narrows the search geographically and can reduce results.

6.4 Stage D: Generate Queries & Find Candidates

The green **Generate Queries & Find Candidates** button lives under "Ready to Find Candidates?". It is disabled while a search is running or when Job Details is incomplete; in that case the message says *"Complete all required job details (title, company, employment type, work arrangement, location) above to continue."* If you still trigger it, you get *"Please complete all required job details before continuing."*, a "Missing Required Fields" toast, and Job Details reopens.

What happens, step by step

- 1 Query generation:** the AI writes 2 to 4 Google "X-ray" queries aimed at LinkedIn profiles, from your title, seniority, skills and location. Status text: "Synthesizing multi-variable search queries...". You cannot see or edit the queries.
- 2 Save the job:** your job (title, company, Egypt, city, type, arrangement, seniority, skills, experience, education, certifications, languages, keywords and the full AI analysis) is saved to your account. Status text: "Querying authorized talent pools across public sources..."
- 3 Start the search run:** a run is created with status *pending* and the platform answers immediately. The heavy work continues on the server in the background.
- 4 Polling:** the page asks for the run's status every 2 seconds, for up to 10 minutes. The button shows a spinner and "Finding Candidates...". (The label "Deduplicating candidates and computing AI match scores..." is misleading: no scoring happens here.)
- 5 Completion:** the success modal opens and a toast says *"Found N candidates! Sourcing complete."*

- 1 **Headline** confirms completion.
- 2 **Summary:** the count of candidates found for your job (wording says “evaluated”, but they are not scored yet).
- 3 **Close** keeps you on the page; **Show Candidates** opens the candidate list for the new job.

Nothing is scored yet

Despite the wording, the search only *finds and stores* people. Scores appear only after you press **Score Candidates** on the candidate list (chapter 7). Your dashboard average and distribution stay empty until then.

What can go wrong

You see	Meaning and action
Red banner + “Sourcing Failed” toast	The run ended in error. The message says why, for example the search service failed on every query. Wait a moment and try again.
“Search Error” toast	The status check could not find the run (“Search run not found.”), so polling stopped.
“Search is taking longer than expected. Check back shortly.”	10 minutes passed. The search may still finish on the server: check the Dashboard’s Sourcing Files for the run.
“Too many requests...”	Rate limit: 10 AI requests per minute, or 5 searches per minute.
“Invalid job analysis data.”	The analysis content is malformed: run Analyze again.
“The search provider is currently unavailable...”	The search service is down or refused the request. Retry later.
Modal shows 0 candidates	The queries returned nothing usable, or every result was outside Egypt. Broaden skills or remove the City, then search again.

Retrying creates a duplicate job

The job is **saved before** the search starts. If the search step fails (for example a rate limit) and you press the button again, a **second job** is created. Check the Jobs list or the candidates job picker afterwards and delete the extra one (chapter 7). To re-search a job you already saved, see chapter 13.

TIP Leave the page?

Once the run has started, the search continues on the server even if you close the tab. Return to the Dashboard and use **View** on the Sourcing Files row when its status turns **complete**.

7. Working the candidate list

/candidates

Candidates

HR User

This page has two modes. Without a job selected it shows the **job picker**. With a job selected (`?jobId=...`) it shows that job's **candidate table**.

7.1 The job picker

/candidates

AI Candidate Dashboard Jobs Candidates Reports Settings

Select a job

1

Job	Created	Location	Type	
React Lead	27 Sep 2026 · 10:12	Egypt	Full-time	View 2
QA Analyst	25 Sep 2026 · 14:40	Egypt	Contract	View 3 Delete this job? Confirm Cancel

- 1

Row: title, date and time created, location and employment type. Newest first.
- 2

View opens that job's candidate table; the trash icon starts a delete.
- 3

Inline confirmation: "Delete this job?" with **Confirm** (shows "Deleting..." while working) and **Cancel**.
- On success a toast says *"Job and its listing removed."* (title "Job Deleted") and the row disappears. On failure you get "Delete Failed".
 - If you have no jobs, the page offers a link to create one.

Deleting a job cannot be undone

There is no recycle bin. The job's own data (its search runs, links and match scores) goes with it. The candidate records themselves are yours and remain in your account.

Only the 20 newest jobs are listed

The picker has no pagination. If you have more than 20 jobs, older ones do not appear here. You can still reach them from `/jobs` via **View Candidates**, which is paged 10 at a time.

7.2 The candidate table

The heading reads "Candidates for <job title>". Opening the page also records that the sourcing file was opened; you will see your own name under **Last Accessed By** on the Dashboard.

- 1 **Score Candidates:** AI-scores everyone linked to this job.
- 2 **Text filters:** name, skill, company, location. Applied only with the button.
- 3 **Status filter, Sort by** and the direction button apply instantly.
- 4 **Apply Filters** and **Clear**.
- 5 **Name:** opens the profile with this job attached.
- 6 **Skills** cell: 3 shown, then "+N".
- 7 **Match** percentage badge.
- 8 **Status** dropdown: change in place.
- 9 **Pagination** text.
- 10 **Export Excel, Previous, Next.**

Filters and sorting

Control	Applies	Behaviour
Search by name / skill	On Apply Filters	Case-insensitive "contains" match. Pressing Enter does nothing.
Company / Location	On Apply Filters	Case-insensitive "contains" match.
Status	Instantly	"All statuses" plus the six statuses (exact match).
Sort by	Instantly	Match Score (default), Experience, Name, Date Added.
Direction button	Instantly	Toggles "High → Low" (descending) and "Low → High" (ascending). Blank values always sort last.
Clear	Instantly	Empties the 5 filters. Keeps your chosen sort.

All filters combine with AND. Any filter change returns you to page 1. The page size is fixed at 10 rows. If nothing matches, you see *"No candidates match these filters."*

TIP Typed but nothing happened?

Text boxes are only a draft until you click **Apply Filters**. The export also uses only the *applied* filters, not what is merely typed.

Table columns

Column	Contents
#	Row number across pages.
Name	Avatar and name ("Unnamed candidate" if unknown). A link to the profile with this job attached.
Location	Location text plus a green Egypt verified badge when the platform confirmed an Egypt location.
Skills	First three skills as badges; +N expands the rest; Show less collapses.
Match	Percentage badge: 70+ green 40-69 amber under 40 red . Blank if not scored.
Date Added	Date and time the candidate record was created.

Column	Contents
Status	Dropdown of the six statuses (disabled while saving).
Profile	View: opens the candidate's public profile page (LinkedIn) in a new tab. Blank if no address.
Actions	Eye icon: open the profile here. Trash icon: delete the candidate (with confirmation).

Score Candidates

- 1 Press **Score Candidates**. It appears only when the list is not empty. The label becomes "Scoring...".
- 2 Toast: "Evaluating all candidate profiles against job requirements...". The AI scores **every candidate linked to the job**, three at a time.
- 3 Result toast "Match Scoring Completed": "Scored N candidates successfully!" and a summary such as "Scored X of Y candidates (Z failed)." The list refreshes.

It re-scores everyone, every time

There is no confirmation and no "score only new ones" option. Each press overwrites earlier scores and uses one AI call per candidate. It counts as one hit toward the 10-per-minute AI limit. The request runs while you wait, so large lists take a while: stay on the page until the toast appears.

TIP Manager alert on strong matches

If at least one newly scored candidate reaches **80% or more**, your HR Manager is notified that you scored candidates with strong matches.

Changing a status

Pick a value in the row's Status dropdown. It saves at once (no confirmation) and a toast confirms "Candidate status marked as '<status>'". Status belongs to the candidate, so it applies in every job that person is linked to and changes the Dashboard counts. Meanings are in chapter 9.

Viewing and deleting a candidate

The eye icon opens the profile. The trash icon shows an inline **Delete?** with **Confirm** and **Cancel**.

Deleting a candidate is permanent and global

The toast says "Candidate removed from this job." but the whole candidate record is deleted from your account, including their notes, scores, status history and links to **all** your jobs. It is not just removed from this list. There is no undo.

Pagination and Export

The footer shows "Page X of Y (N total)" with **Previous** and **Next**. **Export Excel** is described next.

7.3 Export Excel

Export Excel downloads one spreadsheet containing **all rows matching your applied filters and sort**, not only the current page. A toast "Downloading candidate export spreadsheet..." appears when you click.

File name	<code>candidates-<job-title-slug>-<YYYY-MM-DD>.xlsx</code> , for example <code>candidates-senior-react-developer-2026-09-29.xlsx</code> . The slug is the title in lower case with anything other than letters and digits turned into hyphens; the date is the UTC date. A title with no Latin letters produces <code>candidates--<date>.xlsx</code> .
Sheet	One sheet named Candidates .
Rows	All filtered candidates, in your chosen sort order.
Lists	Skills and requirement lists are joined with commas. Notes are joined newest first.

Blank values	Scores are blank for unscored candidates.
--------------	---

The 20 columns, in order

#	Column	#	Column	#	Column	#	Column
1	Name	6	Skills	11	Education Score	16	Source
2	Headline	7	Match Score	12	Seniority Score	17	Profile URL
3	Company	8	Skills Score	13	Matched Requirements	18	Status
4	Location	9	Experience Score	14	Missing Requirements	19	Recruiter Notes
5	Experience	10	Location Score	15	AI Summary	20	Date Added

Experience is a number of years. Strengths, concerns and the Egypt-verified flag are on screen but are not exported.

Export errors show raw text

The button is an ordinary link. If the export fails (for example too many exports in a minute: limit 20 per minute), your browser navigates to a plain text/JSON error such as *"Too many requests..."* instead of a message on the page. Press Back and try again. The *"Downloading..."* toast appears regardless of the outcome.

8. Candidate profile

Candidate profile

HR User

Open it with the name link, the eye icon, or a Dashboard “Today’s Searched Candidates” link. There is no back button or breadcrumb: use the top navigation or your browser’s Back.

Open it from the job list to see the score

The **Match Score** card appears only when the page was opened *with a job attached* (from the candidate list). Opening from the Dashboard list has no job, so no score card is shown and the candidate is not marked as seen.

Recruiter Notes

Add a note about this candidate...

Add Note

28 Sep, 09:14 - Spoke on the phone...

- 1 **Header card**: photo, name, headline, company · location, experience, all skills, source, **View profile** link (new tab) and summary text.
- 2 **Match Score card** (only with a job attached).
- 3 **Overall Match** circle, coloured by tone.
- 4 **Five sub-score tiles**.
- 5 **Status** card.
- 6 **Recruiter Notes** card.

Match Score card

Item	What it shows
Overall Match	Big percentage circle (0-100). Green at 70+, amber 40-69, red below 40.
Skills	How well the candidate's skills cover the required and preferred skills. Synonyms count (for example JS and JavaScript).
Experience	Candidate's years compared with the job's experience range.
Location	100 if the location matches or the job states no location requirement.
Education	Fit with the education/certifications requirement. Scored conservatively when the profile shows no evidence.
Seniority	Fit with the seniority level. Scored conservatively when no evidence.
AI summary	A short written justification.
Four lists	Matched Requirements, Missing Requirements, Strengths, Concerns. Each shows "None listed." when empty.

If the candidate has not been scored for this job you see *"Not scored for this job yet."* There is no score button on the profile: go back to the list and press **Score Candidates**.

Status card

A dropdown with the six statuses. Changing it saves immediately (no confirmation). After a change the page may temporarily lose the Match Score card or note box until you reload it, because the update replaces the page's data.

Recruiter Notes

- 1 Type in the box (placeholder *"Add a note about this candidate..."*).
 - 2 Press **Add Note**. It is disabled while the box is blank or while saving (*"Saving..."*).
 - 3 The note appears at the top of the list with date and time; toast: *"Recruiter note saved to candidate record"*.
- Notes are private to you and your managers/admins; the author name is not printed on the note.
 - Empty notes are refused: *"Note cannot be empty."*
 - Notes cannot be edited or deleted and have no length limit. The list shows *"No notes yet."* when empty.
 - Notes appear in the Excel export (column Recruiter Notes).

TIP Write notes for future you

Because notes are permanent, write in short factual entries: date of contact, outcome, next step. Avoid sensitive personal remarks.

No status history and no delete here

Status changes are recorded behind the scenes but are not shown to you. To delete a candidate use the trash icon on the candidate list.

9. The six statuses

Every candidate has exactly one status. It starts as **New** and you change it by hand. The statuses are, in dropdown order:

Status	Meaning (recommended use)	Effect in the platform
New	Found by the search; nobody has looked yet. Default.	Counted in the Pipeline chart and in report tile "New".
Reviewed	You looked at the profile and scores.	Counted as Reviewed.
Shortlisted	Worth pursuing.	Counts toward Shortlisted Talent and the Shortlisted column of Sourcing Files. Your HR Manager is notified.
Rejected	Not suitable.	Counted as Rejected. No notification.
Contacted	You reached out to the candidate.	Counts as progressed in reports.
Hired	Candidate was hired.	Counted as Hired. Your HR Manager is notified.

Order on the Dashboard chart

New, Reviewed, Shortlisted, Contacted, Hired, Rejected. (The dropdown order differs: Rejected sits before Contacted.)

Who is notified

Only changes **to** Shortlisted or Hired notify your team's HR Manager (if you belong to a team with an active manager). You never receive notifications yourself. Setting the same status again does nothing and is not logged.

Status is global for the candidate

If the same person is linked to two of your jobs, changing status in one job changes it in the other, and the Dashboard counts.

TIP Suggested flow

New → Reviewed → Shortlisted → Contacted → Hired, with Rejected as the exit at any point. Keeping statuses current makes the Pipeline chart and your reports meaningful.

10. How the AI pipeline works

You do not need to understand the internals to use the platform, but knowing what each stage does explains why results look the way they do.

From job description to shortlisted candidate. Stages 4 to 7 happen automatically after you press the search button; scoring is a separate manual step.

Stage by stage

Stage	What really happens
1. Text extraction	PDF, DOCX or TXT is converted to plain text on the server. No image reading (OCR).
2. AI analysis	An AI model (OpenAI) reads the description and returns a profile: job title, seniority, employment type, required and preferred skills, minimum/maximum years of experience, education, certifications, languages, industries, keywords and responsibilities. It is told to use only what is in the text. Location is then forced to Egypt.
3. Query generation	The AI writes 2 to 4 Google search strings that target LinkedIn profiles. Each contains a group of title synonyms (3 to 6), one or two short quoted skill phrases and a quoted location. If the job already has earlier queries, new ones avoid repeating them.
4. Search	Every query is run on Google through a search service (SerpApi), all at once. Requests are biased to Egypt (Google Egypt, country code EG). If you chose a City, the location parameter is that city. Each query normally returns about 10 organic results, so 2 to 4 queries give roughly up to 40 raw results. Company pages, job boards (Indeed, Glassdoor, Bayt, Wuzzuf and similar), recruitment agencies and job postings are filtered out; individual profiles are kept.
5. Enrichment	When configured, each LinkedIn profile is read by an Apify scraper to obtain the real name, headline, current company, location, about text, skills and total years of experience. Enrichment overrides the thinner data from the search snippet. If it fails, the run still continues with search data only.
6. Location verification	For Egypt-scoped jobs (all jobs), each candidate's location is checked: text that mentions Egypt or one of Egypt's 27 governorates passes; text naming somewhere else (for example Dubai) is dropped . With no location text, the AI judges from the headline and summary; "unknown" is kept. Verified people get the green Egypt verified badge.
7. Clean, dedupe, save	Implausible values are removed (for example a company equal to the group's own name, or impossible years of experience). The same person is recognised by LinkedIn address (or other address, or name + company) and merged. If you already have that person, the existing record is only <i>topped up</i> (never overwritten) and reused; otherwise a new candidate with status New is created. All are linked to your job.

Stage	What really happens
8. Scoring (manual)	Only when you press Score Candidates . The AI compares each candidate's profile with the job's requirements and returns an overall match score 0-100 and five sub-scores (skills, experience, location, education, seniority), plus lists of matched and missing requirements, strengths, concerns and a summary.

Scoring is model-determined

There is **no fixed formula or weighting** in the platform. The overall score is whatever the AI returns as its weighted judgment, and the five sub-scores are the AI's own. The same candidate may score slightly differently if re-scored. Treat scores as a ranking aid, not a verdict, and read the AI summary, missing requirements and concerns before deciding.

How the AI scores skills

Skills are matched by **meaning**, not exact words: JS = JavaScript, Postgres = PostgreSQL. An umbrella term such as "Front-End Development" can be satisfied by HTML, CSS and JS, with partial coverage split between matched and missing. It is told never to invent skills that are not on the profile.

Score colours

70 to 100 green 40 to 69 amber 0 to 39 red

"Strong match" for manager notification is 80 or above.

What the search cannot know

Google shows only public pages. It returns people whose public profile matches the wording of the queries; it is not a database of everyone in Egypt. Profiles with the location written as an abbreviation or a city not in the governorate list (for example "Alex") may be dropped by the Egypt check.

11. Reports for your own work

The Reports page is open to every role. For an HR User the scope is always “**My work**”, described under the banner as “*Your own work only.*” The scope is decided by the server from your role; it cannot be changed. Because you are the only member, each per-member table has one row (yours).

- 1 **Header:** scope and period, report name.
- 2 **Report tabs:** the four reports.
- 3 **Period, From, To, Update report.**
- 4 **CSV** and **Excel** download buttons.
- 5 **Summary tiles** and then detail tables (with a Total row where relevant).

The four reports

Report	What it shows for you
Team Performance	“Jobs, sourcing runs, and candidate outcomes.” Tiles: Members, Jobs created, Sourcing runs, Candidates sourced, Shortlisted, Average match. Table “Performance by member”: Jobs, Sourcing runs, Completed runs, Active runs, Failed runs, Candidates, Shortlisted, Contacted, Rejected, Avg match. Counts cover items <i>created</i> in the period; candidate statuses are the current ones.
Activity	“Sign-ins and recorded actions.” Tiles: Sign-ins, Failed sign-ins, Sourcing runs, Logged actions, Active members. Table columns: Sign-ins, Failed sign-ins, Job actions, Sourcing runs, Teammate files opened, Candidate actions, Team changes, Reports, Logged actions, Last activity; plus “Actions by type”. The activity log only started recording in September 2026.
Recruitment Pipeline	Where candidates sourced in the period currently sit: Total, New, Reviewed, Shortlisted, Contacted, Rejected, Hired, and Progressed % (share now Shortlisted, Contacted or Hired).
Sourcing Quality	Average AI match quality. Tiles: Average match, Files evaluated (x / y), Strong files (average 70% or more), Weak files (below 40%). Tables: by member, by job (with best file) and by sourcing file (status, created, candidates, shortlisted, avg match, up to 500 files).

Date range

The **Period** menu offers All time, Today, Last 7 days, Last 30 days (default), Last 90 days and Custom range. Choose **Custom range** and fill **From** and **To**, then press **Update report** (setting the dates alone is also treated as custom). Tab links keep your period.

Exporting

CSV and **Excel** download the current report. Files are named `<report-title>-report-<scope>-<YYYY-MM-DD>.csv|xlsx`. CSV has a header block (title, scope, period, generated date) followed by each table; Excel has an **Overview** sheet plus one sheet per table. Exports are limited to 20 per minute. Exporting and simply viewing a report are recorded in the activity log (a view is recorded once per 10 minutes for the same report).

If a report fails

You see *"This report couldn't be generated. Try again in a moment."*

TIP Weekly habit

Once a week open **Recruitment Pipeline** for the last 7 days and check that few candidates remain in *New*. Then check **Sourcing Quality** to see which job files score weakest and may need better requirements.

12. Button and control reference

Every control an HR User meets, page by page.

Login and top bar

Control	Where	What it does
Log in / Sign up	/login	Submits e-mail and password. Shows "Please wait..." meanwhile.
Continue with Google	/login	Starts Google sign-in.
Need an account? Sign up	/login	Switches between log in and sign up.
AI Candidate (brand)	Top bar	Goes to Dashboard.
Dashboard / Jobs / Candidates / Reports / Settings	Top bar	Navigate to the section.
Log out	Top bar	Signs out immediately and returns to login.
Try again / Back to dashboard	Error / not-found pages	Retries the page / returns to Dashboard.

Dashboard and Jobs

Control	Where	What it does
New Job Opening	Dashboard banner	Opens New Job.
Browse Candidates	Dashboard banner	Opens the job picker.
New Job	Dashboard (Sourcing Files), Jobs	Opens New Job.
View	Dashboard row	Opens the job's candidate list.
Candidate name link	Dashboard, Today's list	Opens profile without a job (no score card).
View Candidates	Jobs row	Opens the job's candidate list.
Previous / Next	Jobs	Pages of 10 jobs.

New Job

Control	Where	What it does
Card headers	Job Details, Job Description	Fold or unfold the card.
Save & Collapse	Job Details	Folds the card only; nothing is saved.
Upload File (PDF / DOCX)	Job Description	Upload mode (default).
Paste Text	Job Description	Paste mode.
Dropzone	Job Description	Click or drag a PDF/DOCX/TXT up to 10 MB.
Change File / X	After upload	Choose another file / remove the file and its text.
Analyze Job with AI	Job Description	Runs AI analysis. Needs 50+ characters.
Location, City, Employment Type, Experience fields	Requirements	Edit the extracted profile.
Tabs: Skills & Technologies / Education & Qualifications / Responsibilities & Keywords	Requirements	Switch chip lists.

Control	Where	What it does
Chip text,  , 	Requirements	Rename, remove, or add an item (Enter also adds).
	Requirements	Generates queries, saves the job, starts the search, polls until complete.
 / 	Success modal	Dismiss / open the job's candidate list.

Candidates and profile

Control	Where	What it does
	Job picker	Opens the job's candidate table.
Trash icon,  , 	Job picker	Delete the job (irreversible) or cancel.
	Candidate table	AI-scores all candidates of the job.
Name / company / location / skill boxes	Candidate table	Draft filter text.
	Candidate table	Applies the four text filters.
Status filter, Sort by, direction button	Candidate table	Apply immediately.
	Candidate table	Resets the filters.
 / 	Skills cell	Expand / collapse skills.
Status dropdown	Row and profile	Changes status at once.
 (Profile column)	Row	Opens the external profile in a new tab.
Eye icon	Row	Opens the candidate profile.
Trash icon,  , 	Row	Delete the candidate permanently (all jobs).
	Candidate table footer	Downloads the 20-column spreadsheet of filtered rows.
 / 	Candidate table	Pages of 10 candidates.
	Profile header	Opens the external profile in a new tab.
	Profile	Saves the note (permanent).

Reports

Control	Where	What it does
Report tabs	Reports	Team Performance, Activity, Recruitment Pipeline, Sourcing Quality.
Period, From, To	Reports	Chooses the date window.
	Reports	Reloads with the chosen period.
 / 	Reports	Downloads the current report.

13. Step-by-step tasks

Task 1: Run your first search

- 1 Click **New Job Opening** on the Dashboard (or **New Job** on the Jobs page).
- 2 Fill **Job Title**, **Company**, **Employment Type** and **Work Arrangement**.
- 3 In Job Description, upload a PDF/DOCX/TXT (or choose **Paste Text** and paste at least 50 characters).
- 4 Press **Analyze Job with AI** and wait for "Requirements successfully extracted from job spec!".
- 5 Review the Extracted Requirements: fix title and seniority, keep Egypt, optionally choose a City, set the experience range, prune and add skill chips on the three tabs.
- 6 Press **Generate Queries & Find Candidates**. Wait while the button shows "Finding Candidates..." (usually up to a few minutes).
- 7 When "Candidate Sourcing Complete!" appears, press **Show Candidates**.
- 8 Press **Score Candidates** and wait for the success toast.

TIP Before you press the big green button

Check that the Company and Employment Type are the ones you want: the job cannot be edited later.

Task 2: Search again for a job

There is no "run again" button and no edit screen for saved jobs. Searches can only be started from the New Job page, which always saves a **new** job. To search again (for example with a different City or refined skills):

- 1 Open New Job and re-enter the details, then re-upload or re-paste the same description.
- 2 Analyze, adjust the requirements as needed, and start the search.
- 3 People you already hold are recognised and reused (their records are only topped up, not duplicated, and keep their status and notes); they are linked to the new job. New people are added.
- 4 Score the new job's candidates and, when you are happy, delete the old job from the job picker to keep your list tidy.

Old scores stay with the old job

Scores are stored per job and candidate. A new job starts unscored, even for people who were scored in the old job.

Task 3: Score and shortlist

- 1 Open **Candidates**, click **View** on your job.
- 2 Press **Score Candidates** and wait for "Match Scoring Completed".
- 3 Leave the sort at **Match Score**, direction **High → Low**.
- 4 Open the top candidates with the eye icon or name link. Read the AI summary, missing requirements and concerns; open **View profile** to check the real profile.
- 5 Set the status to **Shortlisted** (or **Rejected**) directly in the Status dropdown.
- 6 To view only your shortlist, set the Status filter to **Shortlisted**.

Task 4: Add notes

- 1 Open the candidate from the job's list.
- 2 Scroll to **Recruiter Notes**, type the note.
- 3 Press **Add Note** and wait for the "saved" toast. The note shows at the top with date and time.

Task 5: Export

- 1 Open the job's candidate list.
- 2 Set filters and sort the way you want the spreadsheet (type text filters, then press **Apply Filters**).
- 3 Press **Export Excel**. The file `candidates-<title>-<date>.xlsx` downloads with all matching rows across pages.
- 4 To export a report instead, use **CSV** or **Excel** on `/reports`.

TIP Score first, export second

Score columns are blank for unscored candidates, so score before exporting a list you plan to share.

Task 6: Clean up jobs

- 1 Open **Candidates** to see the job picker (20 newest jobs).
- 2 Click the trash icon next to the job you no longer need, then **Confirm**.
- 3 Toast "Job and its listing removed." confirms it. Candidates remain in your account.
- 4 To remove individual candidates, open the job's list and use the row trash icon (permanent, all jobs).

Check before you delete

Export the list first if you may need the scores or notes later; deletion of a job or a candidate cannot be undone.

14. Rules, limits and who can see your work

14.1 Limits at a glance

Rule	Limit	Notes
AI requests (analysis, query generation, scoring)	10 per minute	Shared counter; a whole "Score Candidates" run counts as one.
Candidate searches	5 per minute	Each press of Generate Queries & Find Candidates.
Exports (Excel of candidates, report CSV/Excel)	20 per minute	Combined counter.
Job description file	10 MB; PDF, DOCX, TXT	No .doc, no images.
Job description text	50+ characters	No maximum.
Search wait in the browser	10 minutes	Search may continue on the server afterwards.
Queries per search	2 to 4	Written by AI; you cannot edit them.
Location	Egypt only	Optional City: Cairo, Alexandria, Giza, Suez.
Rows per page	10	Jobs, candidates. Picker: 20 newest jobs.
Dashboard Sourcing Files	Latest 20 runs	Today's list shows latest 8.
Strong match threshold (manager alert)	80%	Only for newly scored candidates.
No limit	Uploading and extracting files, opening pages, changing statuses, adding notes, listing candidates.	

When you hit a rate limit

You see *"Too many requests. Please slow down and try again shortly."* Wait about a minute. Limits are counted per person and are approximate (they are kept in server memory, so exact timing can vary).

14.2 Who can see your work

Your data	You	Your HR Manager	Admin	Other HR Users
Jobs, candidates, scores, notes	Read + change	Read-only (if same team)	Read-only	No
Dashboard numbers	Yes	Rolled into team pages	Rolled into org pages	No
Your activity (sign-ins, job actions, status changes)	Via your report	Yes (team activity)	Yes	No
Shortlist / Hired status changes, strong-match scoring, search started/completed/failed	No bell	Notified	Not notified	No

- **Read-only means read-only.** A manager or admin who opens your file sees a banner "Viewing <name>'s sourcing file - read-only" and cannot change statuses, notes or scores.
- **Opening is recorded.** When a manager or admin opens your candidate list, it is logged; their name then shows under **Last Accessed By** on your Dashboard's Sourcing Files table, and the event appears in the team activity feed.
- **Everything you do is logged** (signing in and out, creating and deleting jobs, starting searches, scoring, status changes, notes, deleting candidates, viewing and exporting reports). The log cannot be edited or deleted.
- Excel exports are files you keep: once downloaded, the platform no longer controls who sees them. Treat candidate data as confidential.

Processing by third-party services

Job descriptions are sent to an AI service for analysis and scoring, and candidate profile information is sent for scoring and location checks. Do not paste confidential text that should not leave the company.

15. Troubleshooting FAQ and gotchas

Frequently asked questions

Question / symptom	Answer
I searched but every score is empty and the Dashboard average says "No evaluated files yet".	The search never scores. Open the job's candidate list and press Score Candidates . The modal wording "identified and evaluated" is misleading.
The search failed and I pressed the button again: now I have two jobs.	The job is saved before the search starts, so each retry creates a new job. Delete the duplicate from the Candidates job picker.
The toast says the candidate was removed "from this job". Is it only removed here?	No. The candidate is deleted from your whole account, with notes, scores and links to all jobs. It cannot be undone.
I cannot find an older job on the Candidates page.	The picker lists only the 20 newest jobs. Use Jobs and its View Candidates link (10 per page).
I opened a candidate from "Today's Searched Candidates" and there is no Match Score.	That link skips the job. Open the candidate from the job's list to see the score; that also marks the candidate as seen.
The Unseen number never goes down.	A candidate becomes seen only when opened with the job attached (from the candidate list).
Export Excel replaced my page with unreadable text.	The export failed (usually too many exports in a minute, or a temporary error) and the link shows the error text. Press Back and retry.
My Excel is missing rows I typed a filter for.	Only <i>applied</i> filters are exported. Press Apply Filters first.
Analyze Job with AI is greyed out after uploading a PDF.	Probably a scanned PDF (image only): the extracted text is empty. Copy the text out and use Paste Text. Also check the description is 50+ characters.
My upload of a large PDF fails before the 10 MB message.	The size rule is checked on the server after upload. Hosting can reject very large requests earlier; compress the file or paste the text.
The dropdown for Employment Type looks empty after analysis.	The AI proposed a value not in the list. Select one of the four options.
I edited Job Title / Employment Type in the requirements editor but the Jobs list did not change.	The job's title and type come from the Job Details card when it is filled in. Set them there.
I chose a City but results look nationwide.	City narrows the search location for Google. Queries still contain the Egypt-wide wording; filtering by city is approximate.
Zero or few candidates found.	Queries returned little, or people were dropped by the Egypt check. Remove overly narrow skills, remove the City, use common job titles, and search again.
A candidate I know is in Egypt is missing.	The Egypt check drops locations that do not mention Egypt or one of its governorates (for example a bare city or abbreviation).
A run shows "running" for a very long time.	The background job may have been stopped by the platform on long runs. After roughly 10 minutes, start the search again on a new job and tell your Admin.
Scoring says "Scored X of Y candidates (Z failed)".	Some candidates could not be scored (AI unavailable or unexpected answer). Press Score Candidates again after a minute.
Today's count is 0 but I searched today.	Only brand-new candidate records count, and "today" follows server time (UTC).
After changing a status on the profile, the Match Score card vanished.	Reload the page.
I cannot see a Team or Admin menu.	Those are for HR Managers and Admins. Your role is HR User.
I get "Unauthorized" or am sent to the login page with "doesn't have access yet".	Your account was deactivated or was never approved. Contact an Admin.

Gotchas at a glance

Irreversible

- Deleting a job
- Deleting a candidate (global)
- Saving a note
- Score Candidates overwrite

Not automatic

- Scoring after a search
- Filters until Apply Filters
- Saving from Save & Collapse
- Re-running a saved job

Not editable

- Saved jobs
- Search queries
- Notes
- Account e-mail / password

TIP Good habits

1. Keep job descriptions clear and text-based. 2. Prune skill chips before searching. 3. Score, then review, then set statuses. 4. Export before deleting anything. 5. Check the Dashboard's Sourcing Files for red or stuck runs.

Still stuck?

Note the time, the page, and the exact message shown, then contact your HR Manager or an Admin. Every error response carries a request identifier that lets the technical team trace what happened.
